

Question 1.

Your class is throwing a pizza party! Write a program that asks the user **how many slices** are left, then counts down from that number to 1 as people grab slices — printing a message each time.

Sample output (user enters 5):

```
How many slices are left? 5
Slice 5 is gone!
Slice 4 is gone!
Slice 3 is gone!
Slice 2 is gone!
Slice 1 is gone!
All pizza has been eaten. 🍕
```

Question 2.

You're guarding a top-secret vault. Write a program that keeps asking the user for the password until they get it right. The correct password is java123. Once they enter it correctly, welcome them in!

Sample output:

```
Enter the password: hello
Wrong password! Try again.
Enter the password: pass
Wrong password! Try again.
Enter the password: java123
Access granted! Welcome in! 
```

Question 3

Write a simple guessing game! The secret number is 7. Keep asking the user to guess. After each wrong guess, tell them if they were too high or too low. Stop when they guess correctly and show how many tries it took.

Sample output:

```
Guess the number (1-10): 3
```

```
Too low!
```

```
Guess the number (1-10): 9
```

```
Too high!
```

```
Guess the number (1-10): 7
```

```
Correct! You got it in 3 tries!
```
